Foresight-oriented IT system supporting higher education and career development

FORhesIT

The goal of the FORhesIT project is to create an IT system supporting higher education and career development using foresight methods, i.e. interdisciplinary, participatory planning methods and tools, oriented to action in the medium or long term. Its idea stems from the need to improve the competitiveness, effectiveness of the career counseling system and the need to develop the educational offer at a higher level.

The project "Foresight-oriented IT system supporting higher education and career development (FORhesIT)" benefits from a grant of EUR 148,620.00 received 85% from Iceland, Liechtenstein and Norway as part of the EEA Grants and 15% from Poland's Government Budget (Project number: EEA/21/K4/W/0118).
