Foresight-oriented IT system supporting higher education and career development

FORhesIT

The goal of the FORhesIT project is to create an IT system supporting higher education and career development using foresight methods, i.e. interdisciplinary, participatory planning methods and tools, oriented to action in the medium or long term. Its idea stems from the need to improve the competitiveness, effectiveness of the career counseling system and the need to develop the educational offer at a higher level.

The project "Foresight-oriented IT system supporting higher education and career development (FORhesIT)" benefits from a grant of EUR 148,620.00 received 85% from Iceland, Liechtenstein and Norway as part of the EEA Grants and 15% from Poland's Government Budget (Project number: EEA/21/K4/W/0118).

1

Foresight methodology for future-oriented labour market

2

IT tool supporting the process of creating alternative career development scenarios

3

Manual for users of the IT tool with examples of scenarios of classes/workshops/individual sessions

Create the Future with FORhesIT

FORESIGHT is exploring the future - not predicting it!

The tools developed in the FORhesIT project can be used by everyone who cares about their professional future and plans career paths, including:

- **academic lecturers and counselors** from career offices, using them to conduct creative workshops focused on the future of the labor market and education,
- **students and graduates** who will be able to analyze their own conditions, individual career paths and personal development.
